

UDAY

Java Backend Developer | Spring Boot & Microservices
Bangalore, India | +91 99185 14781 | guptauday594@gmail.com
[LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 2+ years designing and shipping production-grade Java 17 and Spring Boot microservices for high-concurrency, distributed systems. Built and deployed 20+ REST APIs powering a Warehouse Execution System that processes 5,000+ daily transactions, improving API latency by 25% and reducing failure rates by 15%. Strong in microservices architecture, REST API design, relational database optimization, containerization with Docker, and Agile delivery. Seeking a Java / Spring Boot Developer role building scalable, resilient backend services.

TECHNICAL SKILLS

Languages: Java 17, SQL, JavaScript, TypeScript, HTML/CSS, C++

Backend & Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Cloud (Eureka, Gateway), Hibernate, JDBC, REST APIs, Microservices Architecture, RabbitMQ

Databases: MySQL, PostgreSQL, SQL Query Optimization, Schema Design, JPA/ORM

DevOps & Tools: Docker, Git, Maven, AWS, SonarQube, Postman, Swagger / OpenAPI, IntelliJ IDEA, Linux

Testing & Practices: JUnit, Mockito, Agile / Scrum, SDLC, OOP, REST API Design, Microservices Design Patterns

Security: JWT, OAuth2, Spring Security, Role-Based Access Control (RBAC), API Gateway

Frontend: React, Redux, Material UI, SCSS, Micro-Frontends

PROFESSIONAL EXPERIENCE

Software Engineer

Unisys India

July 2024 – Present

Bangalore, KA

- Designed and developed backend services for a Warehouse Execution System using Java 17 and Spring Boot, supporting a high-concurrency, distributed microservices architecture that processes 5,000+ daily transactions with real-time task orchestration.
- Built and deployed 20+ production REST APIs for inventory, order, and task-management modules, enabling reliable data flow across microservices and integration with autonomous mobile robot (AMR) systems.
- Optimized complex database schemas and SQL queries, reducing API response latency by 25% and improving throughput for high-volume warehouse and AMR task operations.
- Increased system reliability by cutting API failure rates 15% through centralized exception handling, structured logging, and SonarQube code-quality gates, while collaborating in Agile sprints with React micro-frontend and robotics teams.

Associate Software Engineer (Intern)

Unisys India

Feb 2024 – July 2024

Bangalore, KA

- Developed a responsive React micro-frontend (React, Redux, TypeScript) for a Java backend platform, improving the experience for 10,000+ active users.
- Integrated 20+ RESTful APIs and enhanced UI performance with SCSS and Material UI, reducing bounce rate by 15%.

TECHNICAL PROJECTS

UrbanFlow — Microservices-Based Parking Management System

Java, Spring Boot, Spring Cloud, Docker, Spring Security

- Built a distributed parking-management system with 8 Spring Boot microservices for real-time spot allocation, using Spring Cloud Gateway for routing and Netflix Eureka for service discovery.
- Containerized all services with Docker and reduced inter-service latency through optimized communication and caching.
- Secured APIs with JWT authentication and role-based authorization via Spring Security at the gateway layer, ensuring stateless, centrally validated requests across services.

EDUCATION

B.Tech, Computer Science and Engineering (IoT)

SRM Institute of Science and Technology, Chennai | GPA: 9.45 / 10

Sep 2020 – June 2024

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- NPTEL: Database Management Systems
